

VIJAY AMARNATH M V

Full Stack Developer | Angular | Ionic | Node.js | TypeScript

Chennai, India | +91 94428 82709 | vijayamarnathmv@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience building and deploying enterprise web applications and API services using React, Angular, Node.js, and TypeScript. Delivered 6 production Micro Frontend modules at Purpleslate on a Module Federation architecture, serving 5 user roles with measurable improvements in deployment velocity (40%), API efficiency (35%), and bundle size (25%). Hands-on with containerized deployments using Docker and Kubernetes, CI/CD pipeline development, and building monitoring dashboards with Grafana. Comfortable working cross-functionally with development and operations teams to ship reliable, scalable services.

Self-motivated and eager to grow into open-source observability and infrastructure tooling — currently deepening skills in Python/Generative AI/LangChain to support full-stack, cloud-native application development.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS/SASS, Python (Learning)
Frontend	Angular (v14–v17), ReactJS, Ionic Framework (v5/v6/v7), RxJS, Angular Material, Bootstrap, Tailwind CSS
Mobile	Ionic Angular, Capacitor, Cordova, Cross-Platform (iOS & Android), PWA, Ionic Native Plugins
Backend	Node.js, Express.js, MongoDB, Mongoose, REST APIs, Elasticsearch, JSON, NoSQL, FastAPI (Learning)
State Mgmt	NgRx (Store, Effects, Selectors), Akita Store, RxJS Subjects/BehaviorSubject, Angular Signals
Architecture	Micro Frontend, Module Federation, Lazy Loading, Component Libraries, MVC, MVVM, SOLID
Auth & APIs	HttpClient, HTTP Interceptors, JWT, OAuth 2.0, Postman, Swagger, RBAC, Route Guards
Testing	Jest, Unit Testing, Code Coverage, TDD
Performance	Lazy Loading, OnPush Change Detection, AOT Compilation, Tree Shaking, Core Web Vitals
DevOps	Git, GitHub, GitLab, Bitbucket, npm, Webpack, GitHub Actions, Docker, Kubernetes, Grafana, CI/CD, Netlify, pnpm
Methodology	Agile, Scrum, Kanban, Code Reviews, Pair Programming, JIRA, Confluence
Learning	Python, FastAPI, LangChain, LangGraph, Generative AI, RAG

PROFESSIONAL EXPERIENCE

Technology Engineer — Angular | Node.js | Ionic | React Jun 2024 – Present

Purpleslate Private Limited | Chennai, India (Intern: Jun 2024 – Sep 2024, converted to full-time: Sep 2024)

Project: Import-Export Business Approver — a multi-module enterprise platform for import/export approval workflows, built on an Angular Micro Frontend architecture with Ionic-based mobile views, role-based approvals, configurable forms, and real-time status tracking.

- Architected 6 independently deployable Angular Micro Frontend modules using Module Federation, cutting deployment lead time by 40% and decoupling 4 cross-functional teams.
- Developed cross-platform mobile views using Ionic Framework with Angular, enabling seamless approver access on iOS and Android with native Capacitor plugins for push notifications and file handling.
- Built full-stack Node.js + Express.js backend services with RESTful API design, MongoDB schemas (Mongoose), JWT authentication, and centralized error middleware powering 30+ API endpoints.
- Engineered 15+ complex Reactive Forms with nested FormGroups/FormArrays and centralized state across 6 federated modules using Akita Store and RxJS, synchronizing 100+ shared entities in real time.
- Reduced redundant HTTP calls by 35% using RxJS operators (shareReplay, switchMap, distinctUntilChanged, debounceTime), trimming page load times from 3.2s to 1.9s.
- Built 20+ reusable Angular Material and Ionic UI components into a shared library, and implemented lazy loading and route-level code splitting on 12+ modules, shrinking initial bundle size by 25%.
- Secured approval workflows with Route Guards and Role-Based Access Control across 5 user roles, and tuned Angular change detection (OnPush, trackBy) to eliminate 60% of unnecessary re-renders.
- Mentored 2 junior developers and led 20+ code reviews across 10 sprint cycles; collaborated with Backend, QA, and DevOps teams to align REST API contracts across 30+ endpoints for staging and production.

Project: NC — Data Analytics Module (6 months)

- Built a full-stack data analytics module using ReactJS and Node.js, enabling users to upload CSV files that are parsed, validated, and loaded into the database for downstream reporting.
- Developed RESTful API services to handle CSV ingestion, data transformation, and SQL-based querying, powering interactive bar and trend charts on the ReactJS dashboard.
- Integrated Elasticsearch to enable fast, flexible querying and search across large uploaded datasets, improving report generation speed.
- Containerized and deployed the module on Kubernetes, with Grafana dashboards for monitoring service health, uptime, and performance.

PROJECTS

Ionic Angular Mobile App — Task Manager

Self-Initiated

Ionic Framework, Angular, TypeScript, Capacitor, Node.js, Express.js, MongoDB

- Built a cross-platform task management mobile app using Ionic Angular and Capacitor, deployed on iOS and Android with offline-first storage via Ionic Storage.
- Integrated a Node.js/Express.js backend with MongoDB for real-time sync and JWT-based authentication; used Ionic Native push notifications for reminders.
- Implemented Angular Reactive Forms for task creation, drag-and-drop prioritization, and RxJS-powered live search with debounce for instant filtering.

Full-Stack E-Commerce Platform

Self-Initiated

Angular, Node.js, Express.js, MongoDB, REST APIs, JWT, Ionic (Mobile View)

- Built an end-to-end full-stack application with an Angular frontend and Node.js + Express.js backend; designed MongoDB schemas with Mongoose, CRUD operations, indexing, and aggregation pipelines.
- Implemented JWT-based authentication, OAuth 2.0 integration, HTTP Interceptors, and role-based product management with Angular Route Guards.
- Added an Ionic mobile view layer for product browsing and cart functionality, enabling PWA deployment with service workers and offline caching.

Personal Portfolio Website

2024

Angular, TypeScript, SCSS, Netlify — vijayamarnath.netlify.app

- Designed and developed a responsive Angular SPA showcasing 4 projects, achieving a Lighthouse Performance score of 95+ across mobile and desktop.
- Implemented lazy loading, image optimization, and AOT compilation to keep Core Web Vitals scores in the green zone.
- Configured GitHub-triggered CI/CD on Netlify, automating production releases on every merge to main and removing manual deployment steps.

EDUCATION

Bachelor of Technology (B.Tech), Information Technology

2019 – 2023

Karpagam College of Engineering, Coimbatore, India

CERTIFICATIONS & CONTINUOUS LEARNING

- Angular — The Complete Guide (Udemy): Components, Services, Routing, RxJS, NgRx fundamentals, Standalone Components, Signals API.
- Ionic Framework with Angular (Self-paced): Cross-platform mobile development, Capacitor, Ionic Native Plugins, PWA deployment, iOS & Android builds.
- Node.js & Express.js (Self-paced): RESTful API design, middleware architecture, MongoDB integration, JWT authentication, error handling.
- Actively deepening hands-on expertise in NgRx, Angular Signals, Standalone Components, and frontend test automation (Jest/Karma).
- Pursuing self-paced learning in Python, Generative AI, LangChain, RAG systems, and full-stack AI application development.
